

FREE Laundry and Process Audit

Committed to providing smarter laundry solutions.

We thoroughly understand best practice in the laundry. Combining Australia Standards, operating systems, internal procedures and a deep-seeded understanding of hygienically clean linen, we have developed a laundry and process audit aimed at pin-pointing the strengths, weaknesses and opportunities present in your laundry facility.

Whether you launder bed linen, toweling, table linen, mops and cloths, uniforms or patient clothing; best laundry practice plays an essential role in guest and patient comfort, whilst protecting employees in their place of work.

Our 50 point checklist highlights critical aspects including layout and design, equipment, maintenance, systems and processing. From dirty off to clean on, we assist you in developing a smarter laundry solution.

Why choose Aqualogic for Programmed Maintenance?

Not all programmed maintenance agreements provide the same depth of service and expertise.

Some are simply general housekeeping programs that do not provide the key benefits of reducing breakdowns, improving occupational health and safety, guaranteeing performance standards and operating efficiencies and increasing the longevity of your investment.

Aqualogic have developed superior service processes and documented checklists to ensure that we deliver on the key expectations of a maintenance program.

Our maintenance programs are designed to deliver key outcomes.

Aqualogic complete more than 6,000 programmed maintenance visits per year. Analysing our performance benchmarks and feedback from our customers indicates machines are lasting longer and unplanned expenditure is reduced.

Capital equipment is a major investment and integral part of the operation of your in-house laundry. Superior maintenance will reduce overall costs, decrease employee stress and increase productivity.

Aqualogic – smarter laundry solutions.

CALL or EMAIL NOW for a free equipment appraisal and maintenance program proposal!
